

Biomedical Equipment

Biomedical Equipment is any patient-related equipment that facility personnel use to assist in performing their duties. A routine schedule for the inspection and maintenance of all patient related equipment helps ensure the safety of patients and personnel, as well as accurate and uninterrupted operation.

Our Biomedical Equipment Technicians are available for routine preventative maintenance for all patient related equipment that is used in health care. Each apparatus is inspected thoroughly, tested, and is restored accordingly to its manufacturer's specification where necessary. Documentation of equipment compliance is provided with a report detailing the inspection of each unit, as well as a unit sticker noting the inspection date signed by the technician.
